

Nicor AMR/AMI Meter Pit Ring

Nicor's new patent pending AMR/AMI Meter Pit Ring is designed to mount onto D2000 Corrugated Ribbed PVC Pipe. The ring and lid are designed to meet the H20 load rating for incidental traffic, be ADA compliant and UV resistant.

Nicor offers a series of brackets for mounting Aclara, Badger Orion, Elster, Itron, Mars, Master Meter, Neptune, Sensus, and KP Electronics endpoints that attach to the underside of the lid or ring with no need for tools. This new ring will eliminate the chance of the AMR/AMI device or cables being damaged when the lid is removed as it will remain in the pit. It also enables the endpoint to be right up against the underside of the frame or polymer lid for optimum RF performance.

Nicor continues to lead the way in innovation to help utilities make their AMR/AMI deployments go smoothly while improving their performance, strength, durability and allow for future developments in technology to be easily adapted to today's solution.
