OUT WITH THE OLD, IN WITH THE NICOR.

Interlocks with double dovetail joints. Pressure from opposite directions secure the connection. Each section is designed so forces to break box are 90° to each other, making it impossible to come apart once installed.

- Rugged H2O design, further enhanced once in the ground and a Nicor lid is installed
- Ribbed wall design ensures frame will not pop out of soil once installed
- Lightweight compared to concrete and polymer concrete
- RF-friendly materials, can mount AMR/AMI devices to any side wall
- Occupies less space in installer trucks and warehouses
- Competitively priced
- Available options include snap-on gopher bottom and adjustable mouse hole

Ship 4.5 times more units per pallet
vs traditional boxes
